MAASAI MARA ECOSYSTEM MAP 2022

Maasai Mara National Reserve

The Maasai Mara is the 1510 km² bordering Serengeti and 24 conservancies

Conservancies creating a safe dispersal areas, wet season pastures, migratory corridors, breeding and feeding areas for migratory and resident wild grazers as well as carnivores.

This increase in space, habitats and natural resources largely ensures a continuous landscape to protect a greater range of biodiversity and currently is undertaken at little financial cost to County or State governments.

Together with the Reserve, conservancies are maintaining a global heritage for us and our children's children.

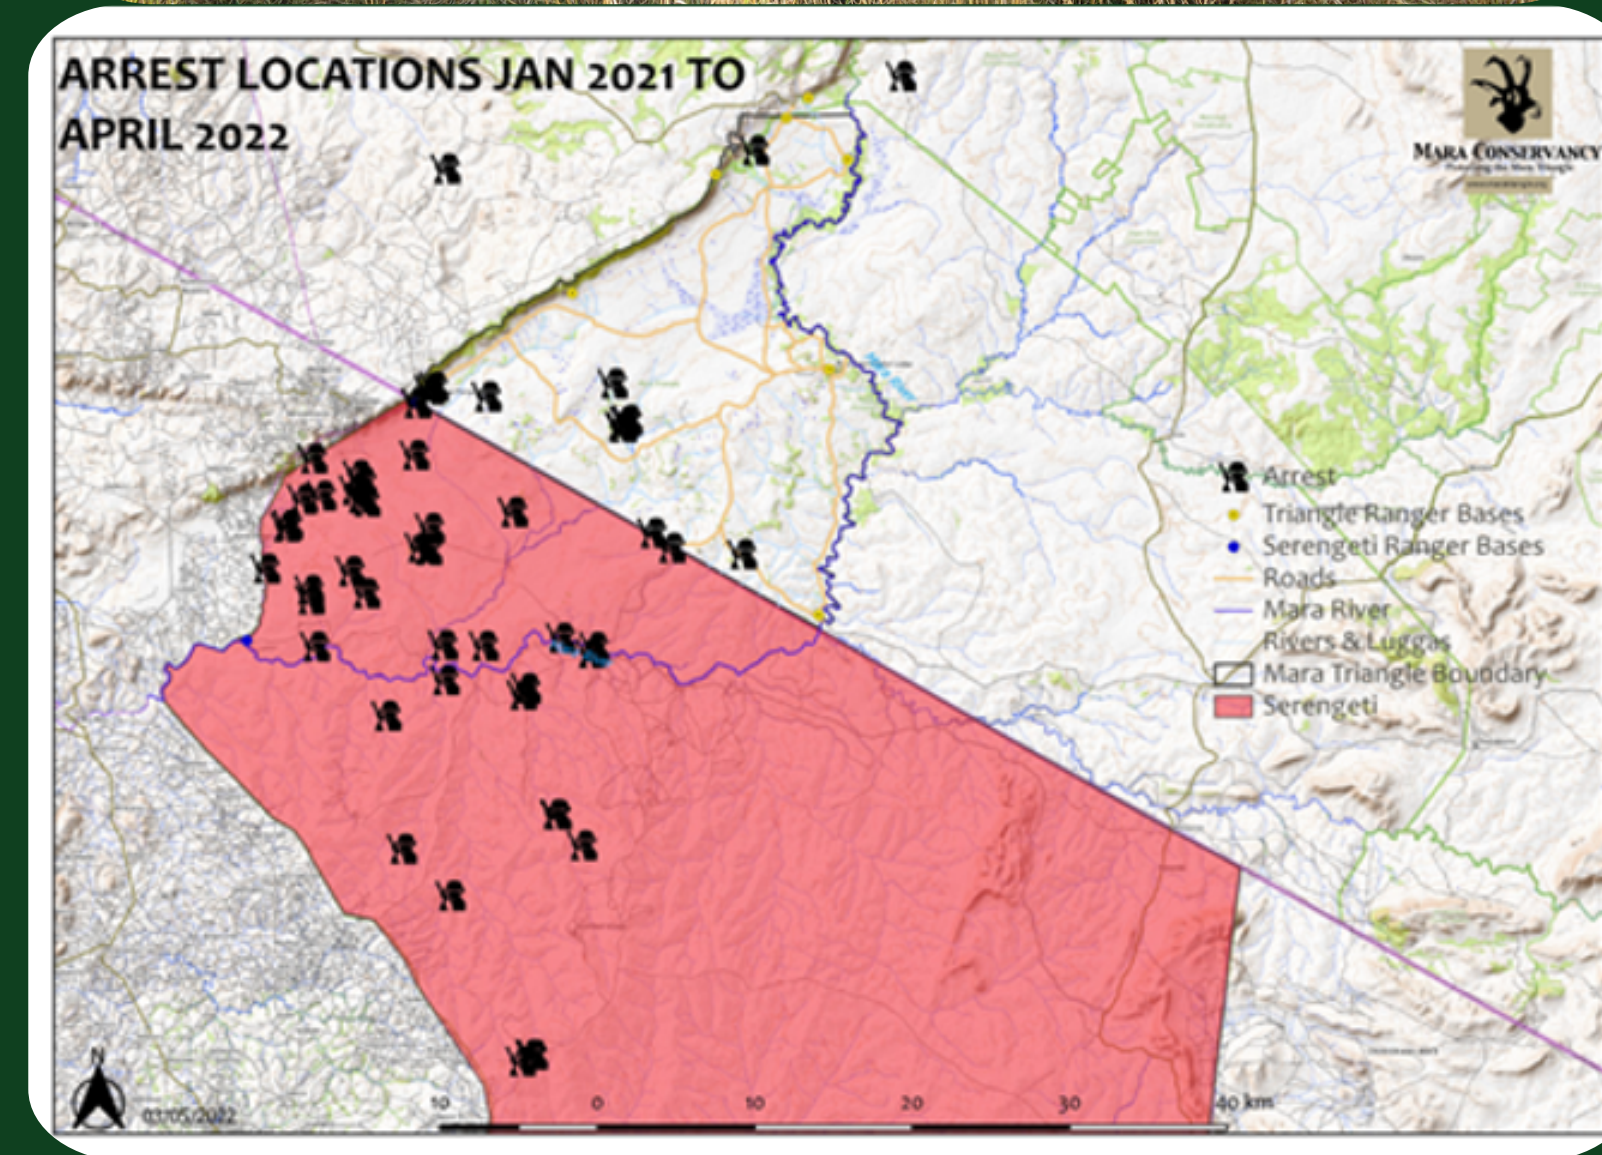

Security

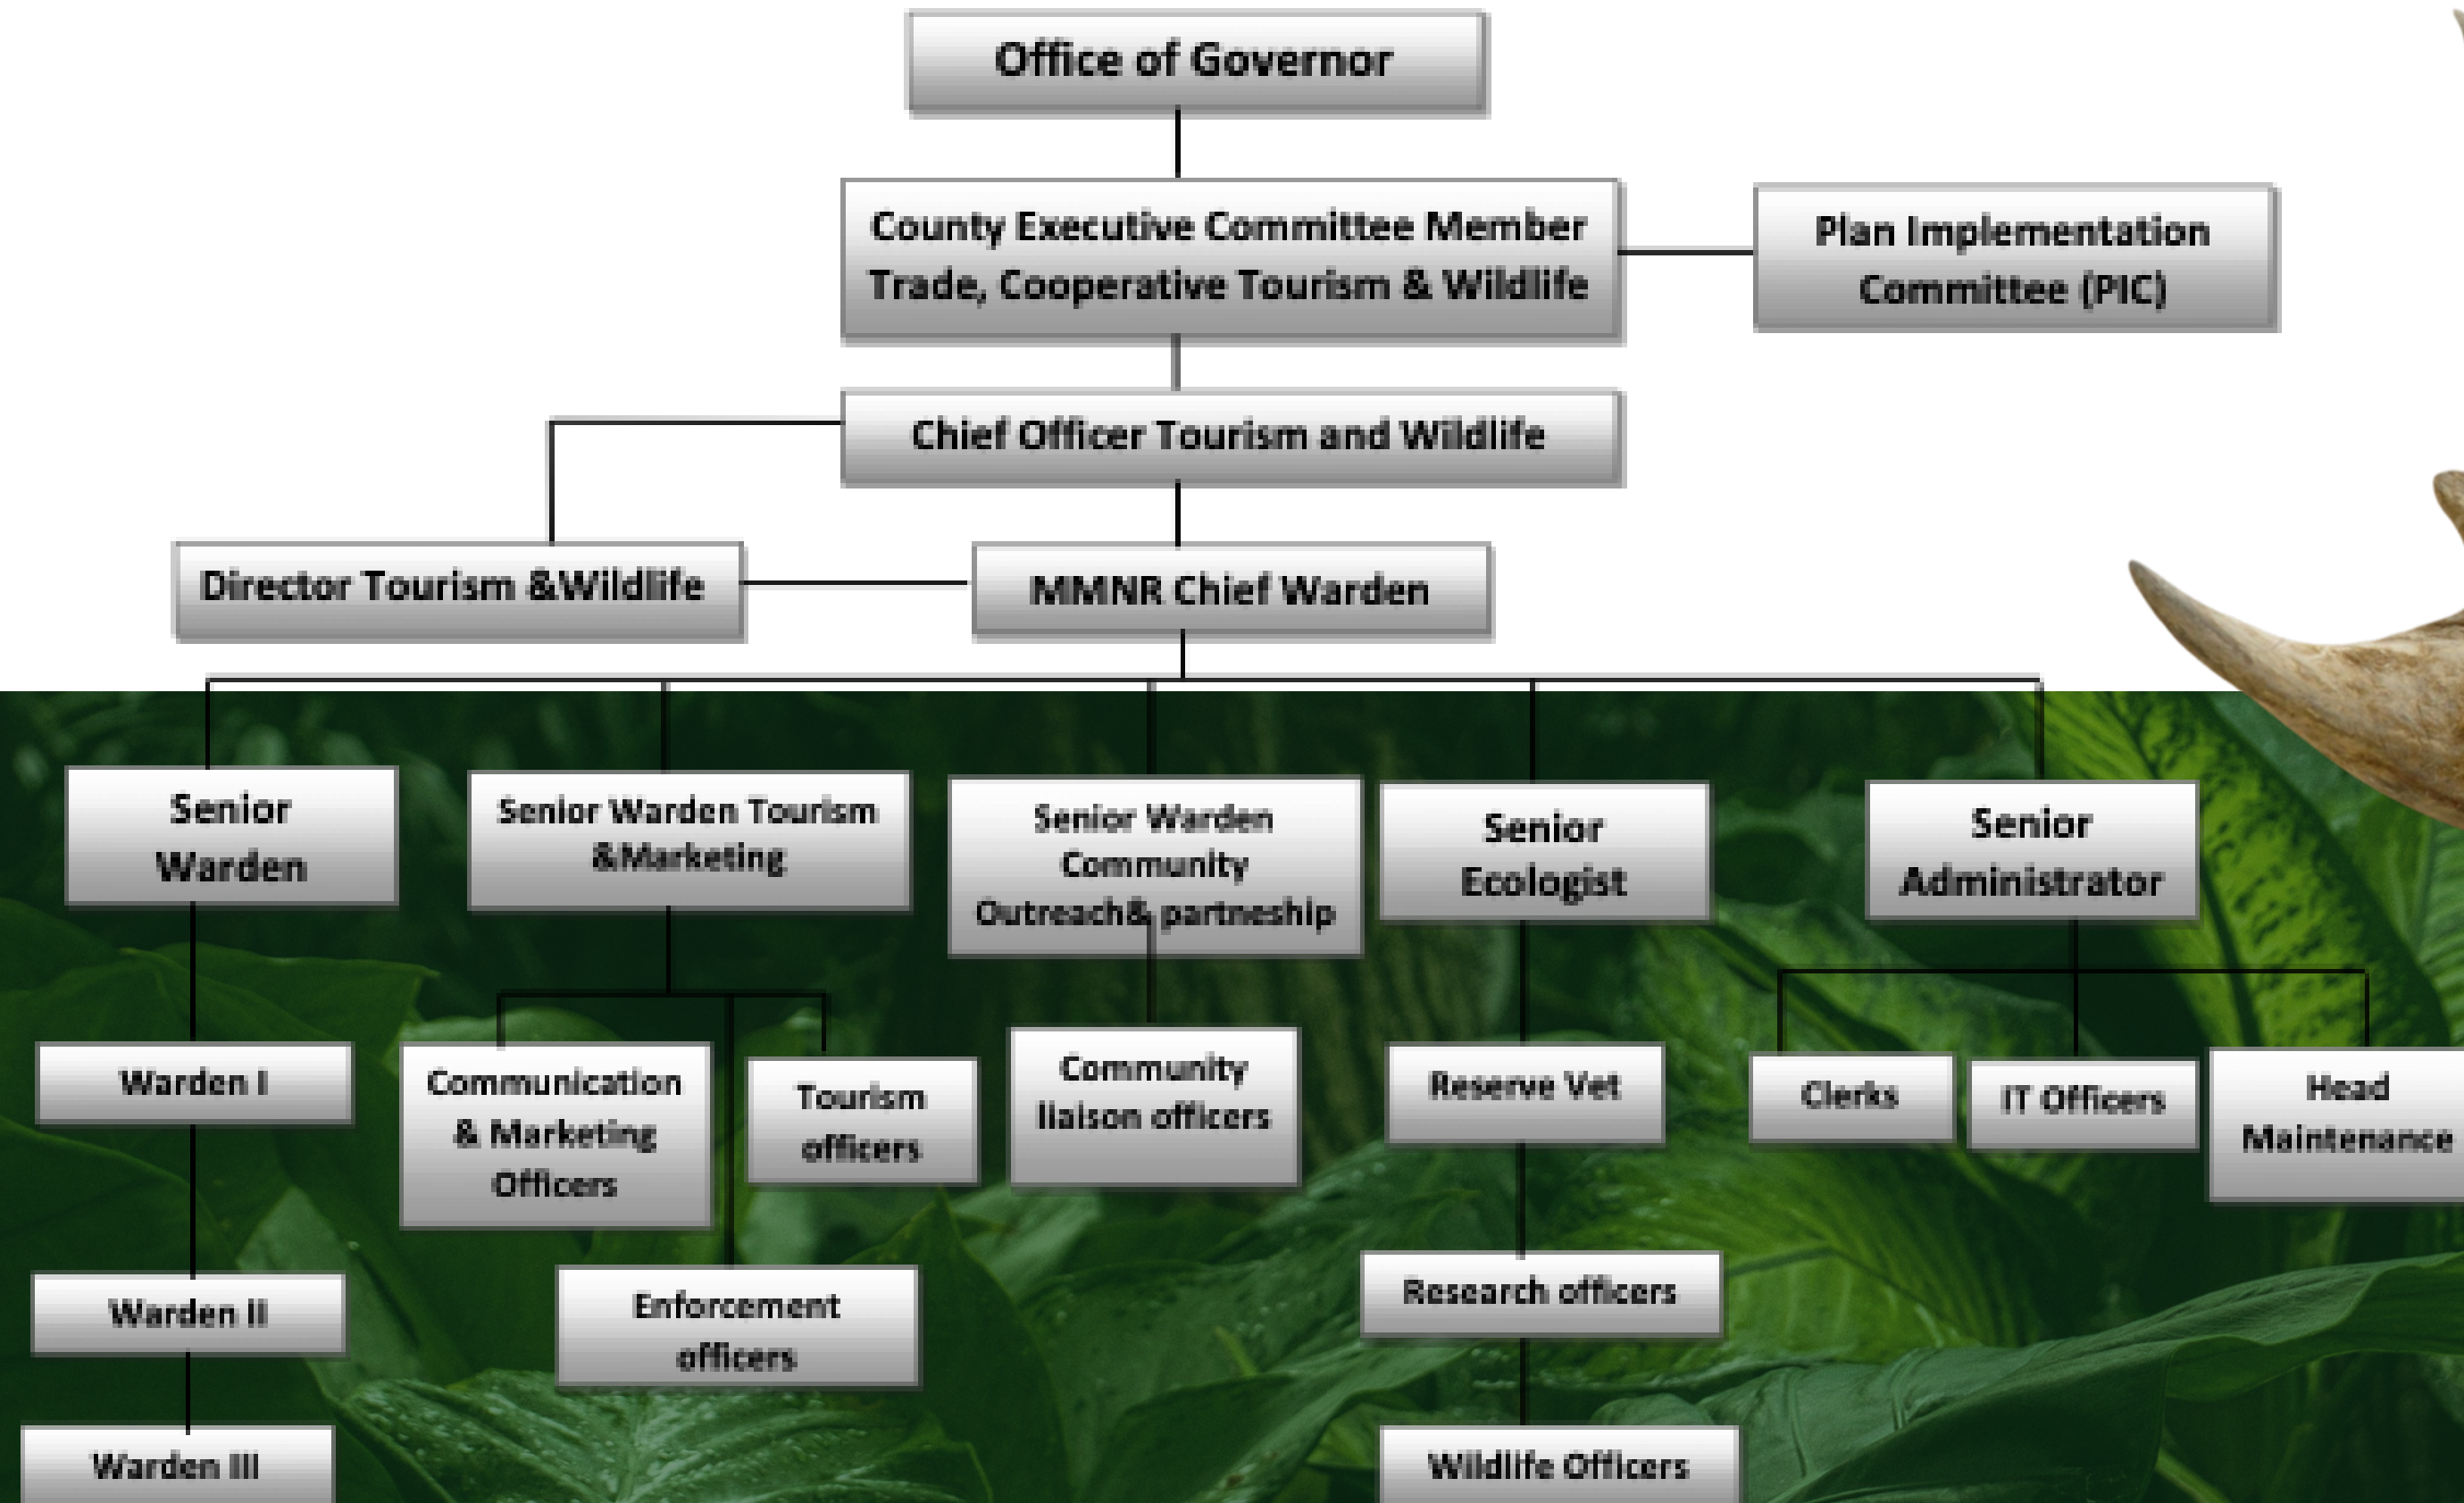

MMNR ranger's priority is the security of the Maasai mara and we deploy anti-poaching/de-snaring teams daily.

They regularly has a joint cross-border anti-poaching patrol with TANAPA. The cooperation of law enforcement agencies has seen culprits brought to justice in an aim to bring sustainable region-wide wildlife management.

The need of collaboration in matters conservation stems from the fact that wildlife knows no boundaries and roam the plains freely.

MMNR ORGANOGRAM

Bushmeat

Bushmeat has become a commercial industry and poachers neighboring country target areas south of the Mara. Rangers are equipped with night vision cameras . For the past years the have managed to arrest 4325 poachers and collected over 65,000 wire snares. Several wild animals have been found dead by the snare, other rescued from trap snare and treated

Canine Unit

canine units, to sniff out illegal wildlife products. The trackers dogs are also able to pick up scents that are many hours old and have assisted in multiple arrest.

Detection and tracker dog teams help to find poachers and prevent the illegal movement of firearms and ivory into and out of the Reserve.

Use of Technology

In the Masai Mara we have employed use of technology that help us in wildlife protection and general management of the protected area. The technology deployed include:

Camera Traps. These consist of motion triggered cameras which have really helped in monitoring of the hard-to-reach areas of the protected area. They have helped in making several arrests.

Thank You!
